

Lighthouse Security bolsters data destruction services with UNTHA collaboration

A global specialist in protective security, surveillance, intelligence, cyber security, due diligence, training and dog handling, has further strengthened its portfolio of services in collaboration with UNTHA UK.

Overview

Company: Lighthouse Security

Shredder: RS30

Input Material: Confidential waste

Output / Goal: Secure data destruction

The business has bolstered the capabilities of its secure destruction division with the investment in a confidential waste shredder, certified to DIN-66399 standards.

The four-shaft shredder is capable of processing up to 1.5 tonnes of these materials per hour and can produce a range of outputs from 10mm–100mm to allow classified materials to be completely destroyed. The cutting chamber also pre-shreds and re-shreds in a single pass, with a 'mixing' action for added peace of mind.

The low-speed nature of Lighthouse Security's new solution, means the materials can be shredded without damaging their fibres, which protects output quality and increases reuse or recycling potential. The zero-waste-to-landfill process therefore upholds high environmental standards, as well as compliance.

UNTHA

shredding technology

Plastic arisings are sent for recycling into plant pots and other products, for example, and textiles are shredded for reuse in the equestrian, surfacing and energy recovery markets.

The shredding process is recorded, with the option for the customer to remotely watch the destruction, in real-time.

"We take our business reputation very seriously, so in choosing a shredding partner, we looked for an organisation with equally high standards."

The UNTHA RS30 is a high performance, industry proven machine, and the changeable screen makes it highly configurable as our company continues to evolve."

"Because we are an end-to-end security specialist, we can collect clients' 'items', unload them into our secure CCTV manned and monitored facility, and apply a dedicated tracking number. Our secure storage facility also has an AI-driven security layer which proactively detects anything entering the area. Everything about this rigorously audited service is robust, so we set high standards for the shredder."

Tim Jensen, founding director, Lighthouse Security.
